A SpaceX Falcon 9 rocket with a Dragon spacecraft atop carrying NASA astronauts Jessica Meir and Jack Hathaway, ESA (European Space Agency) astronaut Sophie Adenot, and Roscosmos cosmonaut Andrey Fedyaev lifts off at 5:15 a.m. EST, Feb. 13, 2026, from Space Launch Complex 40 at Cape Canaveral Space Force Station in Florida to the International Space Station. NASA's SpaceX Crew-12 is the 12th crew rotation mission of the SpaceX Dragon spacecraft and Falcon 9 rocket to the space station as part of NASA's Commercial Crew Program.

Four crew members of NASA's SpaceX Crew-12 mission launched at 5:15 a.m. EST Friday from Space Launch Complex 40 at Cape Canaveral Space Force Station in Florida for a science expedition aboard the International Space Station.

A SpaceX Falcon 9 rocket propelled a Dragon spacecraft into orbit carrying NASA astronauts Jessica Meir and Jack Hathaway, ESA (European Space Agency) astronaut Sophie Adenot, and Roscosmos cosmonaut Andrey Fedyaev. The spacecraft will dock autonomously to the space-facing port of the station's Harmony module at approximately 3:15 p.m. Saturday, Feb. 14.

"With Crew-12 safely on orbit, America and our international partners once again demonstrated the professionalism, preparation, and teamwork required for human spaceflight," said NASA Administrator Jared Isaacman. "The research this crew will conduct aboard the space station advances critical technologies for deep space exploration while delivering real benefits here on Earth. I'm grateful to the NASA and SpaceX teams whose discipline, rigor, and resilience made today's launch possible. We undertake these missions with a clear understanding of risk, managing it responsibly so we can continue expanding human presence in low Earth orbit while preparing for our next great leap to the Moon and onward to Mars."

During Dragon's flight, SpaceX will monitor a series of automatic spacecraft maneuvers from its mission control center in Hawthorne, California. NASA will monitor space station operations throughout the flight from the Mission Control Center at the agency's Johnson Space Center in Houston.

NASA's live coverage resumes at 1:15 p.m. Saturday on [NASA+](#), [Amazon Prime](#), and the agency's [YouTube](#) channel with rendezvous, docking, and hatch opening. After docking, the crew will change out of their spacesuits and prepare cargo for offload before opening the hatch between Dragon and the space station's Harmony module around 5 p.m. NASA also will provide coverage of the welcome ceremony aboard the space station shortly following hatch opening.

Meir, Hathaway, Adenot, and Fedyaev will join the Expedition 74 crew, including NASA astronaut Chris Williams and Roscosmos cosmonauts Sergey Kud-Sverchkov and Sergei Mikaev already aboard the orbiting laboratory, returning the space station to its standard seven crew members complement following the Jan. 14 [departure](#) of NASA's SpaceX Crew-11 mission.

During its mission, Crew-12 will conduct scientific research to [prepare for human exploration](#) beyond low Earth orbit and to benefit humanity on Earth. Participating crew members will study [pneumonia-causing bacteria](#) to improve cardiovascular treatments, [on-demand intravenous fluid generation](#) for future space missions, and research on how physical characteristics may [affect blood flow](#) during spaceflight. Other experiments include [automated plant health monitoring](#) and investigations of plant and nitrogen-fixing microbe [interactions](#) to enhance food production in space.

Crew-12 is part of NASA's Commercial Crew Program, which provides reliable access to space, maximizing the use of the station for research and development, and supporting future missions beyond low Earth orbit by partnering with private companies to transport astronauts to and from the International Space Station.
